Ambu® aScope™ Duodeno

THE STERILE, CONSISTENT AND COST-EFFECTIVE SOLUTION

Produced by the world's leading single-use endoscope supplier, Ambu® aScope™ Duodeno is a single-use endoscope for ERCP procedures. With no reprocessing or repair, sterility straight from the pack and the level of performance you are used to, aScope Duodeno helps optimize workflow, productivity and safety.

STERILE FROM THE PACK FOR PEACE OF MIND

Even with the most stringent cleaning procedures, patient cross-contamination can occur with reusable scopes. aScope Duodeno is sterile straight from the pack, removing the risk of patient cross-contamination.

NO CLEANING, REPROCESSING OR REPAIR

With aScope Duodeno, you always have a duodenoscope available, reducing the risk of delays or bottlenecks within the endoscopy suite. As it is single-use, there is no post-procedure cleaning or reprocessing. This saves time, frees up resource and helps you streamline your workflow.

EASY-TO-USE ENDOSCOPE SOLUTION

aScope Duodeno is part of a ready-to-use endoscope solution consisting of the single-use duodenoscope and Ambu® aBox™ Duodeno unit. Remove aScope Duodeno from its packaging, connect it to aBox Duodeno and the system is ready. aBox Duodeno connects directly to a medical-grade monitor and the documentation systems in use. Once the procedure is over, aBox Duodeno can be cleaned and disinfected with wipes.
